Trenton Forging Passes ISO 9001:2008 Recertification

Trenton Forging Company completed its ISO 9001:2008 audit last week with SGS and has been recommended for recertification. SGS provides registration services to Trenton Forging, which means that they verify the Quality Management System in accordance with a governing body and issue certificates of compliance.

Trenton Forging benefits from being ISO certified by having an organized and documented method for managing the company and continually improving. Quality Manager, Rick Hudock, says, "With a mature system such as ours, it's as simple as doing the things that you say you do."

ISO 9001:2008 Quality Management System certification enables a company to demonstrate its commitment to service quality and customer satisfaction, as well as continuously improving its quality management systems and integrating the realities of a changing world. A valid ISO 9001:2008 certificate shows that Trenton Forging follows the most internationally recognized quality management principles.

Michigan-based Trenton Forging is a leading producer of custom impression die forgings for a wide variety of industries, including automotive, mining, military and agriculture. Trenton Forging has the distinction of being one of the first companies of any kind worldwide to be certified QS9000, and the first closed impression die forging company in the world certified QS9000/ISO9002.
