

For Immediate Release

Michigan, Trenton-Detroit

Trenton Forging Premieres Informational Video on Forging

How a Forging is Made

The Forging Video explains exactly how a forging is made from concept to completion and can be viewed at **Trentonforging.com** in less than two minutes.

Trenton Forging took these bold steps to produce a video of this nature to educate their customers and suppliers about the forging process. Company President, David Moxlow, says, “Many people don’t understand exactly how a forging comes to be and because of that they are not aware of the forging advantages over other processes, like casting or stamping.

Director of Marketing & Promotions, Chelsea Moxlow, says, “By creating this video we will draw positive attention to the industry and attract some new customers along the way.”

Besides describing the process itself, Trenton Forging explains how it provides customers with superior quality products, outstanding customer service and maximum performance while displaying the full range of their capabilities. As for future plans for more videos, Trenton Forging will produce short videos on individual added-value capabilities, like milling, drilling and broaching, to further educate their customers on exactly why they are the industry leader.

Michigan-based Trenton Forging is a leading producer of custom impression die forgings for a wide variety of industries, including automotive, mining, military and agriculture. Trenton Forging has the distinction of being one of the first companies of any kind worldwide to be certified QS9000, and the first closed impression die forging company in the world certified QS9000/ISO9002. Visit us at www.trentonforging.com for more information, to request a quote, or to view the video.
